Education

University of Victoria (UVIC) Sep 2024 - Apr 2028
Bachelor of Science in Computer Science (3rd year)

Work Experience

Software Developer - Aeternum Corp, Edmonton, AB May 2026 - Jul 2026
- Implemented context logic that builds data chunks and relational metadata for improved LLM output with **90%** accuracy
- Researched **WCAG** Level **AA**-compliant interfaces and implemented designs in **Figma,** optimizing accessibility for non-technical users
- Designed a dashboard API to reduce frontend network overhead, reducing latency by **70%**

Frontend Developer - ProperSeer, Calgary, AB May 2025 - Sep 2025
- Created responsive user interfaces using **React, Redux,** and **Bootstrap**, enhancing cross-device usability and improving **page load time by 20%**
- Developed the UI interface for the owner's feature, which provided property owners with easy access to centralized tools

Projects

MarketQuad | Next.js, Supabase, TypeScript, Cloudinary
- Developed a secure authentication system with Supabase, restricting access to "@uvic.ca" emails, token authorization and Postgres Row Level Security for data tables
- Launched an e-commerce marketplace serving **20+** UVic students to buy and sell local items to their peers
- Built a REST API which handles up to **239k** concurrent requests with **99%** uptime with Next.js

Benny | TypeScript, Expo, Java, Springboot, Google Cloud Platform
- Created a receipt-tracking budgeting application to parse receipts and track spending for each grocery trip
- Analyzed receipt data to track areas of spending and built a **data pipeline** to predict a user's total for their next trip via notifications
- Developed using **Java Spring Boot** for receipt parsing with the **Gemini API**, **TypeScript** with **React Native**, and **Firestore** for storage

uEyes | React, Tailwind, FastAPI, Firebase
- Designed a full-stack camera vision application which utilizes the **Gemini API** to describe a user's surroundings with audio in **500ms**
- Developed using WebSockets for a real-time connection, **FastAPI, Firebase, Python, React**, and **Tailwind**
- Containerized the backend with Docker and deployed to Google Cloud Run for scalable hosting

Skills

Languages: Python, JavaScript, TypeScript, Java, C/C++, R, SQL
Frameworks: React, React Native, Next.js, Express.js, FastAPI, Tailwind, SpringBoot, Pandas
Databases & Cloud: MongoDB, PostgreSQL, Firebase, Supabase, Google Cloud Platform, AWS
Other Tools: Git/Github, Figma
